

Little Prasan, from his early childhood, had engaged actively with R&D Implementation activities in the field.

His habit of knowledge seeking questioning based on curious observations made, and his creative imaginations on possibilities of applications of already gained knowledge had contributed to continual improvements of products and services of ThuruL SAFE Environment R&D Implementation Bureau.

Master Prasan is explaining his new product at a national exhibition.

A simple improvisation to Household electric iron for using also as a temperature controllable charcoal heated iron.

His Words - *I had sacrificed many things of my childhood for being with my father, for helping him with his business in wastewater treatment, which brings our daily bread. In turn I have gained a considerable integrated knowledge on this field that could be considered unusual for a school boy of my age. I would perform more sacrifices when needed for contributing for the salvation of livingness of our planet.*

Youngster Prasan is participating in SJWP competition 2011 August

His new idea has a promising potential for enormous water saving in global perspective.
